tg: @yroshiku | zzhusupoverzhan@gmail.com | [Portfolio website](#) | Mobile/[WhatsApp](#): +1 (650) 382-7632 | [LinkedIn](#) | [GitHub](#)

Backend Software Engineer with 4+ years of experience designing and shipping scalable SaaS platforms across CRM and fintech domains. Proficient in Go and Python with deep expertise in RESTful, gRPC, and GraphQL API development, microservices architecture, and performance optimization. Proven track record of reducing API response times, hardening security, and integrating complex third-party systems in production environments

Education

- Master's degree in Software Development | North American University, Houston, USA | expected graduation: Dec 2026 (online)
Relevant Coursework: Data Structures, Algorithms, Web Development, System Design
- Bachelor's Degree in Economics and Business Administration | Cassino University, Cassino, Italy | 2021–2024 (completed alongside full-time employment)
Relevant Coursework: Economics, Data analysis, R, Finance, Market analysis, Management

Work experience

Software Developer – EPAM Systems (Remote/Hybrid):

Mar 2023 – Jan 2026

- Developed and maintained **SaaS RESTful APIs / gRPC / GraphQL** for **B2B CRM systems**.
- Improved CRM performance via database optimization, message brokers, and queues.
- Enhanced **API security**, reducing potential risks by **13%**.
- Refactored legacy code to improve maintainability and readability.
- Implemented efficient **search algorithms** for CRM data, **doubling performance** and reducing response time.
- Created and maintained **Swagger / OpenAPI** documentation.

Software Developer – Kompanion Bank (Remote/Hybrid):

Jan 2022 – Feb 2023

- **Developed and maintained RESTful APIs using Python and FastAPI**, enabling reliable data exchange between backend services and Vue.js front-end applications.
- **Integrated multiple external APIs and services** (Sirene, Digiteal, Ibanity, PEPPOL), supporting secure electronic invoicing and automated document exchange using UBL-compliant XML.
- **Automated database operations** by writing Bash scripts for PostgreSQL backup and recovery in an OpenShift environment, reducing manual maintenance and operational risk.

Personal Projects

OpenClaw website parser | Python, Claude, GPT

An OpenClaw-integrated website parser that automatically reads web pages, extracts useful data like text, images, and links, and converts it into structured information for downstream automation and intelligent actions. It enables OpenClaw agents to gather, understand, and use web content in real time

Online Store | Go, PostgreSQL, Redis, Kafka, gRPC, Docker

An automated online store platform that gathers product data from web pages, maintains an up-to-date catalog, and processes orders. Built with a microservices architecture, it incorporates robust monitoring and logging to ensure reliability, observability, and smooth operation across all services

Technical Skills

- Programming Languages: Go, Python, PL/SQL, Java, SQL
- Frameworks: FastAPI, Django, Spring, Spring Boot, Gorilla Mux, Gin, Chi, GORM
- Developer Tools & Technologies: bash, GitHub, Docker, SQLAlchemy, Pytest, Postman, Apache Kafka, Redis, RabbitMQ, Swagger, CI/CD, Redpanda, AWS, Kubernetes, Azure, GitLab, Unit Testing, Grafana, Prometheus, Sentry, Jaeger, OpenTelemetry, Confluent
- Databases: PostgreSQL, Oracle, MongoDB, ClickHouse
- AI Tools: Claude, GPT, Cursor, Kimi, Gemini

Languages

Kyrgyz (Native) | Russian (Native) | English (C1) | Italian (B2) | German (A2)
